

Stabilizing microfiltration of wine for small wine-makers

DEFINITE STOP TO:

- the presence of yeast and bacteria in wine
- overly unstable and re-fermented wines
- microbial haze in wine bottles
- disturbed wine clarity

FMS microfilter

- suitable for manual fillers with throughput of up to 300 l/hr
- fitted with manometer, purge valve with sanitizing possibilities and control sight-glass enabling to check the contents

FMS microfilter set

- suitable for filling with throughput of up to 900 l/hr
- pre-filter and final membrane set
- longer lifetime of the membrane thanks to the pre-filter
- transport feed pump with option of control system
